

Teaching notes

- 1.** Give students a front cover (tree or Father Christmas), and a blank template sheet. For an added challenge, give students two blank templates, and they can decorate it themselves with a science theme.
- 2.** Ask them to write 24 challenges, tasks, revision activities, key features of a topic etc. on the template sheet.
- 3.** Students should cut out the numbered windows and then stick the front cover and template sheet together.
- 4.** Students could swap advent calendars. Encourage them to open a door each day, and complete the challenges, activities or just simply use to revise. Or just keep one in your classroom to use with your groups, open a window to reveal a plenary or starter activity.
