

Keyword	Definition	Illustration

Teaching notes

This template can be applied to any topic at any level.

It is particularly useful for introducing a topic with new scientific vocabulary (all of them!).

It could be used as a class activity or be kept as an ongoing 'glossary' throughout a topic.

Differentiation

Partially fill the table with keywords, definitions and diagrams and ask students to complete.

Cut up a completed table for students to re-assemble.

As a revision activity, ask students to fill in five squares and then pass to a neighbour to fill in another five squares, and so on until completed. Students should check and review the previous additions before they add new ones.
